

# Radiation Countermeasures for Treatment of Internal Contamination

Medical countermeasure information in this table adapted from:

- [Management of Persons Contaminated with Radionuclides: Handbook](#) (NCRP Report No. 161, Vol. I), National Council on Radiation Protection and Measurements, Bethesda, MD, 2008.
- [Population Monitoring and Radionuclide Decorporation Following a Radiological or Nuclear Incident](#) (NCRP Report No. 166), National Council on Radiation Protection and Measurements, Bethesda, MD, 2011.
- [FDA drug information related to radiation emergencies](#)

## Caveats about Radiation Countermeasures for Treatment of Internal Contamination

Medical countermeasure	Administered for	Mechanism of action	Route of administration	Dosage	Duration of treatment	References for use
Aluminum carbonate	Phosphorus (P-32)	Phosphate binder	PO	600 mg tablet TID or 400mg/5 cc TID		<a href="#">NCRP-suggested</a>
Aluminum hydroxide	Radium (Ra-226) Strontium (Sr-90)	Blocks intestinal absorption	PO	<b>Adults:</b> 60-100 mL (1200 mg) <b>Children:</b> 50 mg/kg, not to exceed the adult dose	Give one dose within 24 hr of radionuclide intake to block intestinal absorption; administer before absorption occurs	<a href="#">NCRP-preferred</a>
	Phosphorus (P-32)	Phosphate binder	PO	600 mg tablet TID or 320 mg/5cc TID		<a href="#">NCRP-suggested</a>
Barium sulfate	Radium (Ra-226) Strontium (Sr-90)	Blocks intestinal absorption	PO	100-300 g (as a single dose in 250 cc water)	Give one dose within 24 hr of radionuclide intake to block intestinal absorption; administer before absorption occurs	<a href="#">NCRP-suggested</a>
<a href="#">Calcium carbonate</a>	Radium (Ra-226) Strontium (Sr-90)	Competes for bone binding sites	PO	Use as directed on label	Begin therapy within 12 hr of radionuclide intake if possible	<a href="#">NCRP-suggested</a>

<a href="#">Calcium gluconate</a>	Radium (Ra-226) Strontium (Sr-90)	Competes for bone binding sites; phosphate binder	IV	5 ampoules (500 mg Ca/amp) in 500 cc 5% dextrose in water (D5W); infuse over 4-6 hours	6 days; begin therapy within 12 hr of radionuclide intake if possible	<a href="#">NCRP-suggested</a>
<a href="#">Calcium phosphate</a>	Radium (Ra-226) Strontium (Sr-90)	Increases excretion	PO	1200 mg	Give one dose within 24 hr of radionuclide intake to block intestinal absorption; administer before absorption occurs	<a href="#">NCRP-suggested</a>
Deferoxamine (DFOA)	Plutonium (Pu-239)	Chelating agent	IM (preferred route)	2 ampoules (500 mg DFOA/amp)	<ul style="list-style-type: none"> <li>Give a single dose, then obtain <a href="#">bioassay</a> to assess residual body burden of Pu-239</li> <li>Repeat as indicated: 500 mg IM (preferred) or IV q4 hr x2 doses, then 500 mg IV q12 hr for 3 days</li> </ul>	<a href="#">NCRP-suggested</a>  DFOA is FDA-approved for Rx of acute and chronic iron poisoning only
			IV (slow infusion)	2 ampoules (500 mg DFOA/amp) at 15 mg/kg/hr		
Medical countermeasure	Administered for	Mechanism of action	Route of administration	Dosage	Duration of treatment	References for use
<a href="#">DTPA</a> (calcium & zinc)	Americium (Am-241) Californium (Cf-252) Cobalt (Co-60) Curium (Cm-244) Plutonium (Pu-238 and Pu-239) Yttrium (Y-90)	Chelating agent	IV (give once daily as a bolus or as a single infusion, i.e., do not fractionate the dose)	<p><b>Adults:</b> 1 g in 5 cc 5% dextrose in water (D5W) or 0.9% sodium chloride (normal saline, NS) slow IV push over 3-4 minutes or 1 g in 100-250 cc D5W or NS as an infusion over 30 minutes</p> <p><b>Children &lt; 12 years:</b> 14 mg/kg/d slow IV push over 3-4 minutes (not to exceed 1 g/day)</p>	<ul style="list-style-type: none"> <li>Begin treatment with Ca-DTPA, then change to Zn-DTPA for maintenance, as indicated</li> <li>Duration of therapy depends on total body burden and response to treatment</li> </ul>	<p>DTPA is <a href="#">FDA-approved</a> for intravenous Rx of known or suspected internal contamination with Am, Cm, and Pu only</p> <p>DTPA is <a href="#">FDA-approved</a> for nebulized inhalation in adults only, and if the only route of contamination is through inhalation</p> <p>DTPA is <a href="#">NCRP-preferred</a> as Rx of the other isotopes listed and <a href="#">NCRP-suggested</a> as a</p>
			Nebulized inhalation (for use in adults only)	1 g in 1:1 dilution with sterile water or NS over 15-20 minutes		

			Wound irrigation fluid	1 g Ca- or Zn-DTPA and 10 cc 2% lidocaine in 100 cc 5% dextrose in water (D5W) or 0.9% sodium chloride (normal saline, NS)	<ul style="list-style-type: none"> <li>Irrigation can be accompanied by IV or inhaled DTPA</li> <li>Amount of DTPA absorbed by wound tissues cannot be measured</li> <li>Avoid overdosing with DTPA and/or 2% lidocaine</li> </ul>	wound irrigation fluid
<a href="#">Dimercaprol</a> (BAL)	Polonium (Po-210)	Chelating agent	IM (300 mg/vial for deep IM injection only)	2.5 mg/kg QID x2 days (days 1 & 2), then BID x1 day (day 3), then QD (days 4-10)	10 days	<a href="#">NCRP-preferred</a>  Dimercaprol (BAL) is FDA-approved for Rx of arsenic, gold and mercury poisoning and when used together with EDTA for Rx of acute lead poisoning only
Medical countermeasure	Administered for	Mechanism of action	Route of administration	Dosage	Duration of treatment	References for use
EDTA	Cobalt (Co-60)	Chelating agent	IV	1000 mg/m <sup>2</sup> /day in 500 cc 5% dextrose in water (D5W) or 0.9% sodium chloride (normal saline, NS); infuse over 8-12 hours	Given as a single dose	<a href="#">NCRP-suggested</a>  EDTA is FDA-approved for Rx of lead poisoning only
			IM	Divide IV dose equally into two doses and administer 8-12 hours apart	Given as a divided dose	
<a href="#">D-Penicillamine</a> (DailyMed)	Polonium (Po-210)	Chelating agent	PO	<b>Adults:</b> 0.75-1.5 g (250 mg/capsule) QD  <b>Children:</b> 30 mg/kg/day (250 mg/capsule) divided into 4 doses	<ul style="list-style-type: none"> <li>Obtain <a href="#">bioassay</a> to assess</li> <li>Continue only if clinically indicated</li> <li>D-Penicillamine has a narrow therapeutic index;</li> </ul>	<a href="#">NCRP-suggested</a>  <a href="#">D-Penicillamine is FDA-approved for Rx of copper poisoning only</a>

					use is <b>associated with high risk of toxicity</b>	
<a href="#">Potassium iodide (KI)</a>	Iodine (I-131)	Blocking agent	PO	<p><b>Adults &gt;40 years:</b> 130 mg/day (For projected thyroid dose <math>\geq 500</math> cGy)</p> <p><b>Adults 18 - 40 years:</b> 130 mg/day (For projected thyroid dose <math>\geq 10</math> cGy)</p> <p><b>Pregnant or lactating women of any age:</b> 130 mg/day (For projected thyroid dose <math>\geq 5</math> cGy)</p> <p><b>Adolescents <math>\geq 70</math> kg:</b> 130 mg/day (For projected thyroid dose <math>\geq 5</math> cGy)</p> <p><b>Children &amp; adolescents 3 - 18 years:</b> 65 mg/day (For projected thyroid dose <math>\geq 5</math> cGy)</p> <p><b>Infants &amp; toddlers 1 month - 3 years:</b> 32.5 mg/day (For projected thyroid dose <math>\geq 5</math> cGy)</p> <p><b>Neonates from birth - 1 month:</b> 16 mg/day (For projected thyroid dose <math>\geq 5</math> cGy)</p>	<ul style="list-style-type: none"> <li>Some incidents will require only a single dose of KI.</li> <li>Incident managers may recommend additional daily doses if ongoing radioactive iodine ingestion or inhalation represents a continuing threat.</li> <li>See also: <a href="#">Potassium Iodide (KI): Duration of Therapy</a>.</li> </ul>	<a href="#">FDA-approved</a> <a href="#">NCRP-preferred</a>
Medical countermeasure	Administered for	Mechanism of action	Route of administration	Dosage	Duration of treatment	References for use
Potassium phosphate	Phosphorus (P-32)	Phosphate binder	PO	600-1200 mg, given in divided doses		<a href="#">NCRP-suggested</a>
<a href="#">Potassium phosphate, dibasic</a>	Phosphorus (P-32)	Phosphate binder	PO (take with full glass of water with meals and	<p><b>Adults:</b> 1-2 tablets (250 mg/tab) QID</p> <p><b>Children &gt;4 years:</b> 1 tablet (250 mg/tab) QID</p>		<a href="#">NCRP-suggested</a>

			at bedtime)			
<a href="#">Propylthiouracil</a>	Iodine (I-131)	Blocking agent	PO	Adults: 2 tablets (50 mg/tab) TID	8 days	<a href="#">NCRP-suggested</a>
<a href="#">Prussian blue, insoluble</a>	Cesium (Cs-137)	Ion exchange; inhibits enterohepatic recirculation in GI tract	PO	<p><b>Adults, children &gt;12 years:</b></p> <ul style="list-style-type: none"> <li>1-3 g (2-6 capsules; 0.5 g insoluble Prussian blue per cap) TID; up to 10-12 g/day (based on <a href="#">Goiânia incident data</a>)</li> <li>3 g (6 capsules; 0.5 g insoluble Prussian blue per cap) TID (see: <a href="#">FDA Package Insert</a>)</li> </ul> <p><b>Children 2 - 12 years:</b></p> <ul style="list-style-type: none"> <li>1 g (2 capsules; 0.5 g insoluble Prussian blue per cap) TID</li> <li>Capsules may be opened and contents</li> </ul>	<ul style="list-style-type: none"> <li>Minimum 30 day course per FDA</li> <li>Obtain <a href="#">bioassay</a> and whole body counting to assess treatment of efficacy</li> <li>Duration of therapy depends on total body burden and response to treatment</li> </ul>	Prussian blue, insoluble, is <a href="#">FDA-approved</a> and <a href="#">NCRP-preferred</a> for Rx of known or suspected internal contamination with radioactive Cs and/or radioactive thallium; FDA-approved for ages > 2 years old only

				<p>mixed with food</p> <ul style="list-style-type: none"> <li>See: <a href="#">FDA Package Insert</a> for pediatric prescribing information</li> </ul> <p><b>Children &lt;2 years:</b> Prussian blue is not FDA-approved for use (IND or <a href="#">EUA</a> may be required)</p>		
Medical countermeasure	Administered for	Mechanism of action	Route of administration	Dosage	Duration of treatment	References for use
<a href="#">Sevelamer</a> (DailyMed)	Phosphorus (P-32)	Phosphate binder	PO	<ul style="list-style-type: none"> <li>2-4 tablets (400 mg - 800 mg/tab) TID</li> <li>Not to exceed 1600 mg TID</li> </ul>	5 days if possible; first dose is the most important	<a href="#">NCRP-suggested</a>
<a href="#">Sodium alginate</a>	Radium (Ra-226) Strontium (Sr-90)	Blocks intestinal absorption	PO (take with a full glass of water)	5g BID x1 day, then 1 g QID		<a href="#">NCRP-suggested</a>
<a href="#">Sodium bicarbonate</a>	Uranium (U-235)	Facilitates increased renal excretion	IV	<ul style="list-style-type: none"> <li>2 ampoules (44.3 mEq bicarbonate / ampoule) in 1000 cc 5% dextrose in water (D5W) or 0.9% sodium chloride (normal saline, NS)</li> </ul>	Administer therapy until urine pH is 8-9 ; continue Rx for 3 days	<a href="#">NCRP-preferred</a>

				<ul style="list-style-type: none"> <li>250 cc (1-2 mEq/kg) slow infusion</li> </ul>		
			PO	2 tablets Q4 hr		
Sodium glycerophosphate	Phosphorus (P-32)		PO	600-1200 mg, given in divided doses		<a href="#">NCRP-suggested</a>
Sodium phosphate	Phosphorus (P-32)		PO	600-1200 mg, given in divided doses		<a href="#">NCRP-suggested</a>
<a href="#">Succimer (DMSA)</a> (DailyMed)	Polonium (Po-210)	Chelating agent	PO	<ul style="list-style-type: none"> <li>100 mg capsules</li> <li>Administer 10 mg/kg or 350 mg/m<sup>2</sup> every 8 hr for 5 days, then reduce; safety and efficacy in children &lt;12 years has not been established</li> </ul>	Reduce frequency of administration to 10 mg/kg or 350 mg/m <sup>2</sup> every 12 hr for an additional 2 weeks of therapy; typical treatment course: 19 days	<a href="#">NCRP-suggested</a>  DMSA is FDA-approved for the treatment of lead poisoning only
Water	Tritium (H-3)	Facilitates excretion	PO	>3-4 liters/day	3 weeks	<a href="#">NCRP-preferred</a>

### References for use

**FDA approved:** Countermeasures so marked have been approved as treatment for internal contamination with the listed radioisotope by the US Food and Drug Administration (FDA).

**NCRP preferred:** Countermeasures so marked have been listed as preferred treatments for internal contamination with the listed radioisotope by the National Council on Radiation Protection and Measurements [[Management of Persons Contaminated with Radionuclides: Handbook](#) (NCRP Report No. 161, Vol. I)]. Except where noted, use of these countermeasures has not been approved by the US Food and Drug Administration (FDA).

**NCRP suggested:** Countermeasures so marked have been listed as suggested treatments for internal contamination with the listed radioisotope by the National Council on Radiation Protection and Measurements [[Management of Persons Contaminated with Radionuclides:](#)

[Handbook](#) (NCRP Report No. 161, Vol. I)]. Use of these countermeasures has not been approved by the US Food and Drug Administration (FDA).
